

Patient Evaluation

Key Words ankle pain, joint pain

Transcript Summary Patient presents with ankle pain requiring evaluation.

Patient Summary

Patient has pain in the ankle that needs to be checked by a healthcare provider.

SOAP:

Subjective: Patient reports ankle pain when standing

Objective: Clinical examination shows joint tenderness and limited range of motion

Assessment: Likely ankle sprain or strain requiring diagnostic imaging

Plan: Recommend X-ray imaging, possible physical therapy, and orthopedic consultation

Related Healthcare Fields:

- Orthopedics: Specializes in bone and joint issues
- Sports Medicine: Treats ankle injuries and musculoskeletal conditions
- Physical Therapy: Helps with rehabilitation and range of motion recovery

Devices needed:

- X-ray: Check for fractures or bone issues
- MRI: Examine soft tissue damage including ligaments and tendons
- Ultrasound: Visualize tendons and ligaments in real-time

Urgency Level:

Level: Medium

Justification: Pain requires medical attention but not emergency care

Recommended Action: Schedule appointment within 1-2 weeks
